- Coffee Creations Mode: Concentrated coffee extraction

Premise

Milk possibilities, made easy

Versatility: From Espresso to Carafe
- A perfect in cup result every time
- Freshly brewed coffee, with generous and thick crema for smooth and indulgent coffees.

Three Milk Recipes
- For Small Cappuccinos to large Latte Macchiatos, all available at any time of the day in one automated system.

High Convenience and Flexibility
• Innovative system with all your coffee & milk recipes available at the touch of a button.

With its integrated milk solution, the ideal coffee and milk moment is at your fingertips. Simply press the button to enjoy your coffee black or with foam. And with a wide array of coffee varieties and cup sizes, less effort means more pleasure.

Open up a world of creative possibilities, thanks to Coffee Creations, a mode that helps you craft all your favourite recipes. This features bring you a concentrated coffee extraction; the first step to make all the iced and milk based coffee drinks you want. Creativity starts here.

CENTRIFUSION technology to gently and fully brew a Carafe, Alto, Mug, Gran Lungo, Double Espresso or Espresso.

Factory Reset Instructions

1. Plug the power cord.
2. Make sure that no accessory is plugged to the machine (milk carafe or descale pipe).
3. Turn on your machine.
4. Press and hold the hot foam button until both descale and rinse alerts blink simultaneously.
5. Press the hot foam button within 15 seconds. Only the hot foam button will blink.
6. Press again the hot foam button. All 3 milk based recipes will blink three times to confirm factory reset.

Descaling

See User Manual or Tutorial video for detailed procedure. You can also use the Nespresso app if your machine is paired. Thanks to the step-by-step procedure, descaling your machine is super easy.

The descaling frequency depends on the machine usage and the water hardness, which varies on how often coffee is consumed in the household and the water of that particular location. The general rule is every 300 cups of coffee. The most reliable way to ensure it is ready to descale is through the descaling alert or by checking the status through the App.

Descaling Alert: The descale alert will blink orange.

Coffee Creations Mode

If you would like to prepare a pre-programmed coffee and milk recipe:
• Insert a Vertuo capsule.
• Press on the Cappuccino or Latte Macchiato one-touch button.

If you would like to go one step further to customize your coffee and milk recipe:
• Insert a Vertuo capsule (this excludes Alto, Carafe and Cold Brew style)
• Enter the “Coffee Creations” mode by double-clicking on the coffee button
• The coffee button will blink turquoise, and your coffee extraction will be concentrated.
• For milk preparation, please refer to the machine User Manual or Quick Start Guide.

With this mode, the coffee volumes are concentrated as below:
• For Espresso capsules: 40ml (1.4 fl oz) —> 25ml (0.85 fl oz)

- For Double-Espresso capsules: 80ml (2.7 fl oz) —> 40ml (1.4 fl oz)
- For Gran Lungo capsules: 150ml (5.1 fl oz) —> 40ml (1.4 fl oz)
- For Mug capsules: 230ml (7.8 fl oz) —> 80ml (2.7 fl oz)
- For Bianco Piccolo and Bianco Doppio, the extraction parameters are already pre-programmed to be mixed with milk. You will find recommendations on our coffee packaging.
- For Alto capsules, we do not recommend using this mode.
- For Carafe and Cold Brew style capsules, coffees have been developed to be extracted without this mode.

Reprogramming Cup Size

The programming is specific to each capsule size. Cup sizes can be preprogrammed from 0.7 oz/20 ml or 17 oz/500ml. To do this, insert the capsule for which you wish to reprogram the volume, push and hold the button until desired volume is reached. Water volume level is then stored for the capsule size used for the programming.

Instructions to Setup Machine after a Period of Non-Use

1. Rinse the water tank before filling the fresh portable water up to the maximum level.
2. Put the water tank back in its position. Plug the power cord and place a container under the coffee outlet.
3. Turn on your machine.
4. Press the coffee button three times within 2 seconds.
5. The machine will start rinsing. The cleaning procedure will run automatically for 5 minutes.
6. Disassemble the milk carafe and clean all six components in the top rack of your dishwasher. In case a dishwasher is not available, refer to 'Cleaning the milk carafe' section.
7. Then reassemble all six dried components and re-attach the milk carafe to the machine (refer to 'Assembling / Disassembling of milk carafe' section).
8. Your machine is now ready to use.

FAQS

- Cable length from coffee machine to plug = 84 cm
- The cup support is adjustable and has 3 different heights available. It can also be removed.
- All milk carafe parts are dishwasher safe. The other removable parts are not.
- In line with the company wide sustainability approach, we seek to minimize the amount of energy required to produce a cup of coffee. Since 2009, all new Nespresso machine ranges have all been equipped with an energy-saving mode, or an automatic power-off function. The Vertuo Lattissma machine has an auto-off at 2 minutes and an A+ energy rating.
- Turn the machine ON by using coffee button or locking/unlocking the lever. Turn the machine OFF by holding the coffee button for 3 seconds.
- All removable spare parts can be hand washed with mild soap and water. The milk carafe can be hand washed or washed in the top rack of your dishwasher. The machine is equipped with a cleaning procedure (see User Manual or tutorial video fro detailed procedure). This process takes approximately 5 minutes. The external part of the machine can be wiped with a damp cloth.
- The machine does not require a specific cleaning frequency from a hygienic perspective. You may define the best frequency after learning how often you use the machine. A suggestion is to run it after two weeks to observe the cleanliness of the water. You may then decide to increase or decrease the frequency based on your preferences.
- The machine is equipped with an automatically rinsing procedure (see User Manual or tutorial procedure). We recommend rinsing your machine after each milk preparation.
- The temperature cannot be regulated. The temperature varies for each blend and cannot be altered. If you would like a warmer coffee, it is recommended to preheat your cup by rinsing it in hot water to help maintain the temperature and mix the coffee with crema once brewed.
- The classic Nespresso capsules cannot be used in the Vertuo machine system. They interact with the systems in different ways. These are two separate lines that will appeal to different types of coffee lovers.

Notes

- The first fully automated Vertuo line machine with a built-in milk frothing solution.
- A Vertuo iteration of the Lattissma models from the Original line that are well known for having built-in recipes that are mapped to a button on the machine.
